

Assignment Time!

React // Components - Part 2 - Loops

Array Prototype Functions

- `Array.forEach` *// Iterate over array and e.g send the data somewhere*
- `Array.map` *// Iterate and transform the original array*
- `Array.filter` *// Iterate and pick out the items that we want*
- `Array.reduce` *// Iterate and create a smaller array or sum things up*

```

React // Components - Part 2 - Loops

```
<h2>Work experience</h2>  
<section id="work" className="work">  
  <Work  
    items={work.items}  
  />  
</section>
```

Assignment // Create React Components

- Give the **education** and **hobbies** section the same treatment as the **work** component.
- Copy/paste the HTML and put it in the **/components/education.jsx**
- Make sure to create a **function**
- **Deconstruct** the properties that we want out of the props object
- Make sure to use the **.map** function // **items.map**
- **Import** your new component and pass the data in **App.js**
