

# Assignment Time!

# React // Components

```
<section className="intro">
  <p>{intro.aboutMe}</p>
  <p>I am {intro.age} years old, which is {intro.age * 7} in dog years.</p>
  <p>{intro.description}</p>
  <p>{intro.welcomeMessage}</p>
  <p>{intro.goal}</p>
</section>
```

# React // Components

```
<Intro  
  aboutMe={intro.aboutMe}  
  age={intro.age}  
  description={intro.description}  
  welcomeMessage={intro.welcomeMessage}  
  goal={intro.goal}  
>
```

# React // Components

```
function Intro (props) {  
  const { aboutMe, age, description, welcomeMessage, goal } = props;  
  
  return (  
    <section className="intro">  
      <p>{aboutMe}</p>  
      <p>I am {age} years old, which is {age * 7} in dog years.</p>  
      <p>{description}</p>  
      <p>{welcomeMessage}</p>  
      <p>{goal}</p>  
    </section>  
  )  
};  
  
export default Intro;
```

# React // Components

```
import Intro from './components/intro';

function App() {
  return (
    <div className="app">
      ...
      <Intro
        aboutMe={intro.aboutMe}
        age={intro.age}
        description={intro.description}
        welcomeMessage={intro.welcomeMessage}
        goal={intro.goal}
      />
    </div>
  );
}
```

# Assignment // Create React Components

- Give the **details** section the same treatment as the intro.
- Copy/paste the HTML and put it in the **/components/details.jsx**
- Make sure to create a **function**
- **Destructure** the properties that we want out of the props object
- Last line of code should be the **export** 'name'
- **Import** your new component and replace the old HTML in **App.js**
- Pass along the props
